

DISCOUNT STATISTICS OF CLOSED-END FUNDS UPDATE FOR THE 2nd QUARTER 2011

This article will update the Highland Global study, “Discount Statistics of Closed-end Funds,” (originally published in November 2005 and updated quarterly) for data relating to the first quarter of 2011. The original article with more details regarding discount statistics of closed-end funds is available at www.HighlandGlobal.com. Beginning with this update report, we will provide only the tables relating to each quarter. Historic releases of our research can be accessed from our website.

All facts and data as set forth in this report were obtained from sources considered to be reliable. Morningstar’s Beta Data & Barron’s Closed-End Fund Data

Each quarter, Barron’s Online (www.barrons.com) reports statistics on publicly-traded closed-end funds. The statistics reported include the discount (or premium) of the market price from the fund’s net asset value (NAV), the 52-week average discount or premium, the fund’s objective, and various return measurements, etc. Morningstar (www.morningstar.com) reports various statistics on these funds, including metrics of beta. Highland Global then calculates the discount range, average, median, and standard deviation and reports these figures based on metrics such as the total data population, beta ranges, fund objectives, etc. The following table provides the summary of the analysis of closed-end funds with discounts to NAV during the second quarter 2011.

	Discount 6/30/2011	52 Wk Avg Discount	Beta

The descriptive statistics presented in the previous tables may be useful in helping the analyst determine an appropriate baseline discount from which adjustments may be made to determine the final discount applicable to the minority interest being valued. In the end, however, the analyst always must use reasoned and informed judgment in determining the appropriate baseline discount and the adjustment from that baseline to reflect the particular risk characteristics of the minority interest being valued.
